CHAPTER 1

Overview

The Dating Services market is a fast growing market

Overview: Summary

Summary

Things have become quiet in recent years in once so turbulent Dating Services market with its numerous start-ups. After some major mergers the market is now dominated by a few players (e.g. Match Group), and platforms now cater to various user groups within one service provider. Users can search for a relationship (Matchmaking), a flirt (Online Dating) or a sex partner (Casual Dating). Most consumers use leading Online Dating services like Tinder or Bumble. The share of consumers that are ready to pay for additional features has been increasing in the last years, what led to strong revenue growth rates for some key players. Facebook is becoming an threat to the market, as it is about to roll out its dating feature worldwide.

Dating Services is an important part of the eServices market

Overview: Market Definition

Market definition

Definition:

Dating Services are generally characterized by their search functionality which enables its users to establish interpersonal relationships via the internet. This includes the focused search for life partners, flirts, or sexual partners. Both dating portals and apps are incorporated into the examination.

(GMV), Users, average revenue per user (ARPU), and user penetration rate. User and revenue figures represent B2C services.

The Matchmaking market contains dating services for the systematic search for partners who are willing to enter into a long-term committed relationship by means of mathematical algorithms. The market of Online Dating is made up of online services that offer a platform on which its members can flirt, chat or fall in love. Two examples are Tinder and Bumble, these platforms focus on casual contacting and easy flirting among their members. Casual Dating comprises online services for the establishment of sexually oriented contacts outside of romantic relationships. Data includes revenue figures in Gross Merchandise Value
